

## POWDER COATING

---

**Allegheny Coatings** now offers powder coating as a finishing alternative on steel, soft metal, and P/M substrates. Powder coating offers the following advantages:

- Superior appearance, with many colors, glosses, and textures available
- Good corrosion and chemical resistance
- Typically resin impregnation is not required for P/M, helping to minimize cost

Powder coating should be considered on any parts currently being wet painted, ecoated, or plated, especially where appearance is important. We would be happy to provide a quotation and/or “no charge” first run samples for any application that you may have. Please contact **Terri Renwick** or **Steve Quinn** if you have any questions.

**We are capable of applying all common powders, including polyester, epoxy, urethane, and nylon.**
