

Allegheny Coatings offers **Barrel Zinc Electroplating**, in addition to **Rack Zinc Electroplating** and various other types of coating processes. We offer hexavalent, trivalent and chrome free chromates and sealers in yellow, clear, olive drab, black, blue, red and green as topcoats for the zinc plating process.

Our rack plating line can process parts that will fit within an area of 18"W x 30"L x 6"T. This line is useful for parts that may be subject to damage or if they are too large to be processed in a batch or barrel process.

With rack plating, we can achieve a uniform and controlled thickness and an aesthetically pleasing appearance. Hydrogen embrittlement relief baking is also available.

We would be happy to provide a price quotation and / or "no charge" first run samples for any process that we provide. Please contact **John Dutton, Lori Mazzulla** or **Steve Quinn** with any questions or needs that you may have.

Please visit our website at www.alleghenycoatings.com for a partial list of the specs that we cover as well as other useful information.
